

An Exceptional Place To Learn

Whitefish Bay School District Provides Free Energy Dashboard to the Community

The Whitefish Bay School District is pleased to announce the availability of a free online energy tracking tool. The free website, named GreenQuest, is a personal energy dashboard that enables community members to track and analyze the energy use for their home or place of business. According to the Whitefish Bay School District, they are providing GreenQuest to the community in order to educate, raise awareness, and further promote energy conservation.

At <http://mygreenquest.com/wfbschoolswi>, district residents can track their energy use and cost; compare their building with its peers; evaluate energy saving projects; track their carbon footprint; analyze energy use with AccuWeather weather data; and as an option, obtain an ENERGY STAR building rating (for commercial buildings). The service is completely free for community members and it is safe and secure—no confidential user information (account numbers, etc.) is entered into GreenQuest.

Brian Chase, District Energy Manager says, “We use an energy management software program to track the utility bills for all district buildings and have found it to be invaluable. When you want to save energy and reduce your carbon emissions, the *first* step is to track your usage. With GreenQuest, we’re giving every household and business in the community a powerful tool to do the same thing.”

Since 2003, the Whitefish Bay School District has successfully worked to reduce energy use and cost by over 20%, saving \$1.2 million. Through this success the district has been recognized by the U.S. Environmental Protection Agency as 2009 ENERGY STAR Partner of the Year.

GreenQuest

GreenQuest is powered by EnergyCAP® software, the energy efficiency software leader for thirty years. Both GreenQuest and EnergyCAP are published by Good Steward Software, an *Inc. 5000 fastest-growing company* based in State College, PA.
